

ONE FILE. THREE STEPS.

Install a Sondero skill in *two minutes*.

A Sondero skill is a plain text file. Copy it into your AI tool's instructions — it works immediately, in any chat.

01 GET THE FILE

Open SKILL.md — copy everything

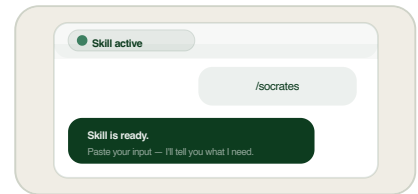

The skill is the file in this folder called **SKILL.md**. Open it in any text editor, select all, copy.

02 PASTE IT IN

Claude Projects → Instructions → Paste

Go to **claude.ai** → **Projects** → **New project**. Click "Instructions". Paste. Save. That's the whole install.

03 START A CHAT

Open a chat — the skill introduces itself

Start a new chat in the project. Type the skill name or describe what you need. The skill tells you exactly what to provide.

HOW TO ACTIVATE ANY SKILL

Type the skill name — or just describe what you need

Every Sondero skill activates when you mention it or describe your problem. No special syntax required. If you're not sure, just open a chat without input — the skill introduces itself and tells you what to paste.

EXAMPLE TRIGGER PHRASES

> /skill-name

> Activate the skill

> Here's my input — [paste your content]

> What do you need from me?

SONDERO • SONDERO.AI
